TinyLogic UHS Universal Configurable Two-Input Logic Gates

NC7SZ57, NC7SZ58

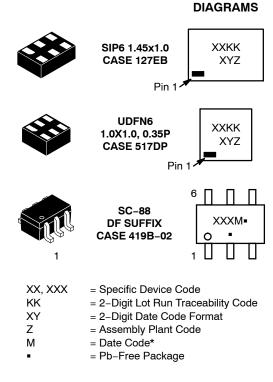

Description

The NC7SZ57 and NC7SZ58 are universal configurable two-input logic gates. Each device is capable of being configured for 1 of 5 unique two-input logic functions. Any possible two-input combinatorial logic function can be implemented, as shown in the *Function Selection Table*. Device functionality is selected by how the device is wired at the board level. *Figures 4 through 13* illustrate how to connect the NC7SZ57 and NC7SZ58, respectively, for the desired logic function. All inputs have been implemented with hysteresis.

The device is fabricated with advanced CMOS technology to achieve ultra high speed with high output drive while maintaining low static power dissipation over a broad V_{CC} operating range. The device is specified to operate over the 1.65 V to 5.5 V V_{CC} operating range. The input and output are high impedance when V_{CC} is 0 V. Inputs tolerate voltages up to 5.5 V independent of V_{CC} operating range.

Features

- Ultra High-Speed
- Capable of Implementing any Two-Input Logic Functions
- Typical Usage Replaces Two (2) TinyLogic Gate Devices
- Reduces Part Counts in Inventory
- Broad V_{CC} Operating Range: 1.65 V to 5.5 V
- Power Down High Impednce Input / Output
- Over-Voltage Tolerant Inputs Facilitate 5 V to 3 V Translation
- Proprietary Noise / EMI Reduction Circuitry Implemented
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

(Note: Microdot may be in either location) *Date Code orientation and/or position may vary depending upon manufacturing location.

ORDERING INFORMATION

See detailed ordering, marking and shipping information in the package dimensions section on page 9 of this data sheet.

Pin Configurations

NOTES:

- AAA represents product code top mark (see <u>Ordering Information</u>).
 Orientation of top mark determines pin one location.
 Reading the top mark left to right, pin one is the lower left pin.
