

# NLSX4373

## 2-Bit 20 Mb/s Dual-Supply Level Translator

The NLSX4373 is a 2-bit configurable dual-supply bidirectional auto sensing translator that does not require a directional control pin. The  $V_{CC}$  I/O and  $V_L$  I/O ports are designed to track two different power supply rails,  $V_{CC}$  and  $V_L$  respectively. The  $V_{CC}$  supply rail is configurable from 1.5 V to 5.5 V while  $V_L$  supply rail is configurable to 1.5 V to 5.5 V. This allows voltage logic signals on the  $V_L$  side to be translated into lower, higher or equal value voltage logic signals on the  $V_{CC}$  side, and vice-versa.

The NLSX4373 translator has open-drain outputs with integrated 10 k $\Omega$  pullup resistors on the I/O lines. The integrated pullup resistors are used to pullup the I/O lines to either  $V_L$  or  $V_{CC}$ . The NLSX4373 is an excellent match for open-drain applications such as the I<sup>2</sup>C communication bus.

### Features

- $V_L$  can be Less than, Greater than or Equal to  $V_{CC}$
- Wide  $V_{CC}$  Operating Range: 1.5 V to 5.5 V  
Wide  $V_L$  Operating Range: 1.5 V to 5.5 V
- High-Speed with 20 Mb/s Guaranteed Data Rate
- Low Bit-to-Bit Skew
- Enable Input and I/O Lines have Overvoltage Tolerant (OVT) to 5.5 V
- Nonpreferential Powerup Sequencing
- Integrated 10 k $\Omega$  Pullup Resistors
- Small packaging: UDFN8, SO-8, Micro8
- NLV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable\*
- This is a Pb-Free Device

### Typical Applications

- I<sup>2</sup>C, SMBus, PMBus
- Low Voltage ASIC Level Translation
- Mobile Phones, PDAs, Cameras

### Important Information

- ESD Protection for All Pins
  - Human Body Model (HBM) > 7000 V

**APPLICATIONS INFORMATION****Level Translator Architecture**

The NLSX4373 auto sense translator provides bi-directional voltage level shifting to transfer data in multiple supply voltage systems. This device has two supply voltages,  $V_L$  and  $V_{CC}$ , which set the logic levels on the input and output sides of the translator. When used to transfer data from the  $V_L$  to the  $V_{CC}$  ports, input signals referenced to the  $V_L$  supply are translated to output signals with a logic level matched to  $V_{CC}$ . In a similar manner, the  $V_{CC}$  to  $V_L$  translation shifts input signals with a logic level compatible to  $V_{CC}$  to an output signal matched to  $V_L$ .

The NLSX4373 consists of two bi-directional channels that independently determine the direction of the data flow without requiring a directional pin. The one-shot circuits are used to detect the rising or falling input signals. In addition, the one shots decrease the rise and fall time of the output signal for high-to-low and low-to-high transitions.

Each input/output channel has an internal 10 k $\Omega$  pull. The magnitude of the pullup resistors can be reduced by connecting external resistors in parallel to the internal 10 k $\Omega$  resistors.

**Input Driver Requirements**

The rise ( $t_R$ ) and fall ( $t_F$ ) timing parameters of the open drain outputs depend on the magnitude of the pull-up resistors. In addition, the propagation times ( $t_{PD}$ ), skew ( $t_{PSKEW}$ ) and maximum data rate depend on the impedance of the device that is connected to the translator. The timing

parameters listed in the data sheet assume that the output impedance of the drivers connected to the translator is less than 50 k $\Omega$ .

**Enable Input (EN)**

The NLSX4373 has an Enable pin (EN) that provides tri-state operation at the I/O pins. Driving the Enable pin to a low logic level minimizes the power consumption of the device and drives the I/O  $V_{CC}$  and I/O  $V_L$  pins to a high impedance state. Normal translation operation occurs when the EN pin is equal to a logic high signal. The EN pin is referenced to the  $V_L$  supply and has Overvoltage Tolerant (OVT) protection.

**Power Supply Guidelines**

During normal operation, supply voltage  $V_L$  can be greater than, less than or equal to  $V_{CC}$ . The sequencing of the power supplies will not damage the device during the power up operation.

For optimal performance, 0.01  $\mu$ F to 0.1  $\mu$ F decoupling capacitors should be used on the  $V_L$  and  $V_{CC}$  power supply pins. Ceramic capacitors are a good design choice to filter and bypass any noise signals on the voltage lines to the ground plane of the PCB. The noise immunity will be maximized by placing the capacitors as close as possible to the supply and ground pins, along with minimizing the PCB connection traces.

## Micro8 CASE 846A-02 ISSUE K

DATE 16 JUL 2020

### GENERIC MARKING DIAGRAM\*

XXXX = Specific Device Code  
A = Assembly Location  
Y = Year  
W = Work Week  
▪ = Pb-Free Package

(Note: Microdot may be in either location)

\*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot "▪", may or may not be present. Some products may not follow the Generic Marking.

### NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 2009.
2. CONTROLLING DIMENSION: MILLIMETERS
3. DIMENSION  $b$  DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE PROTRUSION SHALL BE 0.10 mm IN EXCESS OF MAXIMUM MATERIAL CONDITION.
4. DIMENSIONS  $D$  AND  $E$  DO NOT INCLUDE MOLD FLASH, PROTRUSION OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.15 mm PER SIDE. DIMENSION  $E$  DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.25 mm PER SIDE. DIMENSIONS  $D$  AND  $E$  ARE DETERMINED AT DATUM  $F$ .
5. DATUMS  $A$  AND  $B$  ARE TO BE DETERMINED AT DATUM  $F$ .
6.  $A1$  IS DEFINED AS THE VERTICAL DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT ON THE PACKAGE BODY.

| DIM            | MILLIMETERS |      |      |
|----------------|-------------|------|------|
|                | MIN.        | NOM. | MAX. |
| A              | ---         | ---  | 1.10 |
| A1             | 0.05        | 0.08 | 0.15 |
| b              | 0.25        | 0.33 | 0.40 |
| c              | 0.13        | 0.18 | 0.23 |
| D              | 2.90        | 3.00 | 3.10 |
| E              | 2.90        | 3.00 | 3.10 |
| e              | 0.65 BSC    |      |      |
| H <sub>E</sub> | 4.75        | 4.90 | 5.05 |
| L              | 0.40        | 0.55 | 0.70 |

### RECOMMENDED MOUNTING FOOTPRINT
