# DP3T USB Type C Audio and UART Analog Switch with OVP

## Description

The FSA1153 is a bi-directional, low power, high speed USB2.0 Type-C, Audio and UART analog switch with overvoltage protection. It is configured as a Double-Pole, Triple Throw (DP3T) switch. The FSA1153s protection function prevents damage to Type-C USB 2.0 port pins caused by high voltage. It provides a receptacle side OVP function on the USB 2.0 data pins and will turn off the relative switch once the voltage level on DN\_L or DP\_R exceed the OV threshold. It can withstand up to 20.5 V DC.

#### **Features**

- DP3T USB Type C Audio and UART Analog Switch
- V<sub>DD</sub>: 2.7 V to 5.5 V
- I<sub>CC</sub>: 35 μA Typical
- USB Switch
  - ◆ -3 dB Bandwidth (Sdd21): 850 MHz
- Audio Switch:
  - ◆ Negative Rail Capability: -3 V to +3 V
  - Audio Path  $R_{ON} = 1 \Omega$  (Typ.) at 3.3 V
- UART Switch:
  - RON: 5  $\Omega$  (Typ.) at 3.3 V
  - ◆ Signal Range: 0 4.4 V
- High Power Supply Ripple Rejection
- 20.5 V Overvoltage Protection on DN\_L/DP\_R
- 20.5 V Surge Protection on DN L/DP R

#### **Applications**

- Mobile Phones
- Tablets
- Notebook PC
- Media Player

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. The input and output negative ratings may be exceeded if the input and output diode current ratings are observed.

2. V<sub>SW</sub> refers to analog data switch paths.

## **Application Information**

Over-Voltage Protection

The FSA1153 features over-voltage protection (OVP) on the receptacle side pins DN\_L and DP\_R which will switch off the internal signal routing path if the input voltage exceeds the OVP threshold. When an over voltage condition has occurred the switch will open immediately and remain open until the over voltage condition is removed.
