## MC100LVEL39

### 3.3 V ECL $\div 2 / 4, \div \mathbf{4 / 6}$ Clock Generation Chip

## Description

The MC100LVEL 39 is a low skew $\div 2 / 4, \div 4 / 6$ clock generation chip designed explicitly for low skew clock generation applications. The internal dividers are synchronous to each other, therefore, the common output edges are all precisely aligned. The device can be driven by either a differential or single-ended input signal. In addition, by using the $\mathrm{V}_{\mathrm{BB}}$ output, a sinusoidal source can be AC coupled into the device.

The common enable $(\overline{\mathrm{EN}})$ is synchronous so that the internal dividers will only be enabled/disabled when the internal clock is already in the LOW state. This avoids any chance of generating a runt clock pulse on the internal clock when the device is enabled/disabled as can happen with an asynchronous control. An internal runt pulse could lead to losing synchronization between the internal divider stages. The internal enable flip-flop is clocked on the falling edge of the input clock, therefore, all associated specification limits are referenced to the negative edge of the clock input.

Upon startup, the internal flip-flops will attain a random state; therefore, for systems which utilize multiple LVEL39s, the Master Reset (MR) input must be asserted to ensure synchronization. For systems which only use one LVEL39, the MR pin need not be exercised as the internal divider design ensures synchronization between the $\div 2 / 4$ and the $\div 4 / 6$ outputs of a single device.

The $\mathrm{V}_{\mathrm{BB}}$ pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to $\mathrm{V}_{\mathrm{BB}}$ as a switching reference voltage. $\mathrm{V}_{\mathrm{BB}}$ may also rebias $A C$ coupled inputs. When used, decouple $\mathrm{V}_{\mathrm{BB}}$ and $\mathrm{V}_{\mathrm{CC}}$ via a $.01 \mu \mathrm{~F}$ capacitor and limit current sourcing or sinking to 0.5 mA . When not used, $\mathrm{V}_{\mathrm{BB}}$ should be left open.

## Features

- 50 ps Maximum Output-to-Output Skew
- Synchronous Enable/Disable
- Master Reset for Synchronization
- ESD Protection: Human Body Model; > 2 kV
- The 100 Series Contains Temperature Compensation
- PECL Mode Operating Range:
$\mathrm{V}_{\mathrm{CC}}=3.0 \mathrm{~V}$ to 3.8 V with $\mathrm{V}_{\mathrm{EE}}=0 \mathrm{~V}$
- NECL Mode Operating Range:
$\mathrm{V}_{\mathrm{CC}}=0 \mathrm{~V}$ with $\mathrm{V}_{\mathrm{EE}}=-3.0 \mathrm{~V}$ to -3.8 V
- Internal Input Pulldown Resistors
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity: Level 3 (Pb-Free)
- For Additional Information, see Application Note AND8003/D
- Flammability Rating: UL 94 V-0 @ 0.125 in, Oxygen Index: 28 to 34
- Transistor Count $=419$ devices
- These Devices are Pb-Free, Halogen Free and are RoHS Compliant

Warning: All $\mathrm{V}_{\mathrm{CC}}$ and $\mathrm{V}_{\mathrm{EE}}$ pins must be externally connected to Power Supply to guarantee proper operation.

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm . Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Input and output parameters vary $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. $\mathrm{V}_{\text {EE }}$ can vary $\pm 0.3 \mathrm{~V}$.
2. Outputs are terminated through a $50 \Omega$ resistor to $\mathrm{V}_{\mathrm{CC}}-2.0 \mathrm{~V}$.
3. $V_{I H C M R}$ min varies $1: 1$ with $\mathrm{V}_{E E}$, max varies $1: 1$ with $\mathrm{V}_{\mathrm{CC}}$. The $\mathrm{V}_{\mathrm{IHCMR}}$ range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the HIGH level falls within the specified range and the peak-to-peak voltage lies between $\mathrm{V}_{\mathrm{PP}} \mathrm{min}$ and 1.0 V .
