

NCV8660

Very Low I_q LDO 150 mA Regulator with RESET and Delay Time Select

The NCV8660 is a precision very low I_q low dropout voltage regulator. Quiescent currents as low as 28 μ A typical make it ideal for automotive applications requiring low quiescent current with or without a load. Integrated control features such as Reset and Delay Time Select make it ideal for powering microprocessors.

It is available with a fixed output voltage of 5.0 V and 3.3 V and regulates within $\pm 2.0\%$.

Features

- Fixed Output Voltage of 5 V and 3.3 V
- $\pm 2.0\%$ Output Voltage up to $V_{BAT} = 40$ V
- Output Current up to 150 mA
- Microprocessor Compatible Control Functions:
 - ♦ Delay Time Select
 - ♦ RESET Output
- NCV Prefix for Automotive
 - ♦ Site and Change Control
 - ♦ AEC-Q100 Qualified
- Low Dropout Voltage
- Low Quiescent Current of 28 μ A Typical
- Stable Under No Load Conditions
- Protection Features:
 - ♦ Thermal Shutdown
 - ♦ Short Circuit
- These are Pb-Free Devices

Applications

- Automotive:
 - ♦ Body Control Module
 - ♦ Instrument and Clusters
 - ♦ Occupant Protection and Comfort
 - ♦ Powertrain
- Battery Powered Consumer Electronics

ORDERING INFORMATION

See detailed ordering and shipping information in the dimensions section on page 12 of this data sheet.

PIN DESCRIPTIONS

Pin		Symbol	Function
DPAK	SOIC-8 FUSED		
1	1	IN	Input Supply Voltage. 0.1 μ F bypass capacitor to GND at the IC.
2	2	R _O	Reset Output. CMOS compatible output. Goes low when V _{OUT} drops by more than 7% from nominal.
3, Tab	5-8	GND	Ground
4	3	DT	Reset Delay Time Select. Short to GND or connect to OUT to select time.
5	4	OUT	Regulated Voltage Output. 2.2 μ F to ground for typical applications.

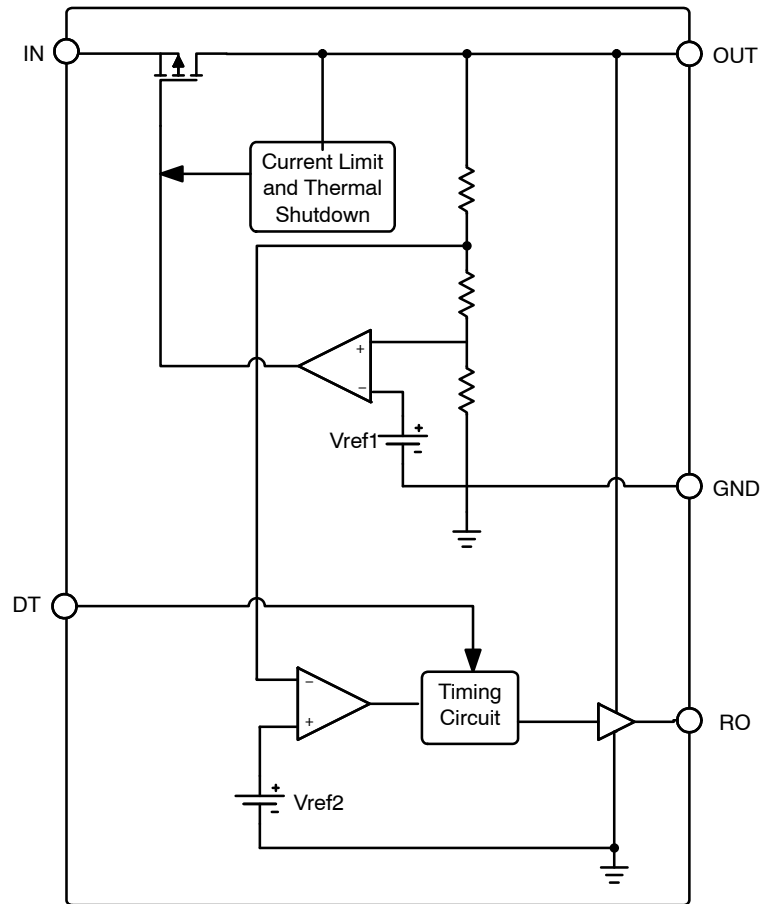

Figure 2. Block Diagram

LEAD SOLDERING TEMPERATURE AND MSL

Moisture Sensitivity Level	DPAK 5 SOIC-8 FUSED	MSL	1 3	-
Lead Temperature Soldering: SMD style only, Reflow (Note 5) Pb-Free Part 60 – 150 sec above 217°C, 40 sec max at peak		SLD	-	265 peak °C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

- The output voltage must not exceed the input voltage.
- External resistor required to minimize current to less than 1 mA when the control voltage is above 16 V.
- This device series incorporates ESD protection and is tested by the following methods:
ESD HBM tested per AEC-Q100-002 (EIA/JESD22-A114)
ESD MM tested per AEC-Q100-003 (EIA/JESD22-A115)
ESD CDM tested per EIA/JESD22/C101, Field Induced Charge Model
- Values represented typical steady-state thermal performance on 1 oz. copper FR4 PCB with 1 in² copper area.
- Per IPC / JEDEC J-STD-020C.

DETAILED OPERATING DESCRIPTION

General

The NCV8660 is a 5 V and 3.3 V linear regulator providing low drop-out voltage for 150 mA at low quiescent current levels. Also featured in this part is a reset output with selectable delay times. Delay times are selectable via part selection and control through the Delay Time Select (DT) pin. No pull-up resistor is needed on the reset output (RO). Pull-up and pull-down capability are included. Only a small bypass capacitor on the input (IN) supply pin and output (OUT) voltage pin are required for normal operation. Thermal shutdown functionality protects the IC from damage caused from excessively high temperatures appearing on the IC.

Output Voltage

Output stability is determined by the capacitor selected from OUT to GND. The NCV8660 has been designed to work with low ESR (equivalent series resistance) ceramic capacitors. The device is extremely stable using virtually any capacitor 2.2 μ F and above. Reference the Output Capacitor Stability graph in Figure 21.

The output capacitor value will affect overshoot during power-up. A lower value capacitor will cause higher overshoot on the output. System evaluation should be performed with minimum loading for evaluation of overshoot.

Selection of process technology for the NCV8660 allows for low quiescent current independent of loading. Quiescent current will remain flat across the entire range of loads providing a low quiescent current condition in standby and under heavy loads. This is highly beneficial to systems requiring microprocessor interrupts during standby mode as duty cycle and load changes have no impact on the standby current. Reference Figure 14 for Quiescent Current vs Output Current.

Current Limit

Current limit is provided on OUT to protect the IC. The minimum specification is 205 mA. Current limit is specified under two conditions ($OUT = 96\% \times OUT \text{ nominal}$) and ($OUT = 0 \text{ V}$). No fold-back circuitry exists. Any measured differences can be attributed to change in die temperature. The part may be operated up to 205 mA provided thermal die temperature is considered and is kept below 150°C. Degradation of electrical parameters at this current is expected at these elevated levels. A reset (RO) will not occur with a load less than 205 mA.

Reset Output

A reset signal is provided on the Reset Output (RO) pin to provide feedback to the microprocessor of an out of regulation condition. This is in the form of a logic signal on RO. Output (OUT) voltage conditions below the RESET threshold cause RO to go low. The RO integrity is maintained down to $OUT = 1.0 \text{ V}$.

The Reset Output (RO) circuitry includes an active internal pullup to the output (OUT) as shown in Figure 24. No external pullup is necessary.

Figure 24. Reset Output Circuitry

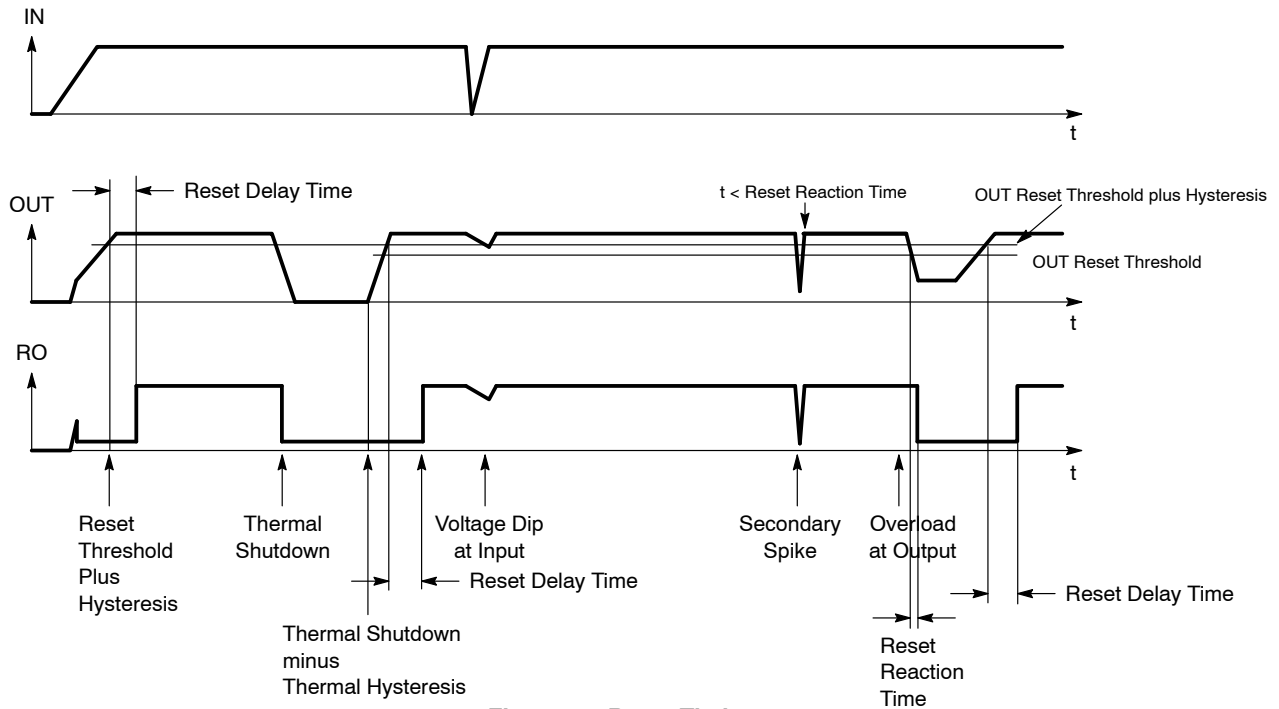

Figure 25. Reset Timing

During power-up (or restoring OUT voltage from a reset event), the OUT voltage must be maintained above the Reset threshold for the Reset Delay time before RO goes high. The time for Reset Delay is determined by the choice of IC and the state of the DT pin.

Reset Delay Time Select

Selection of the NCV8660 device and the state of the DT pin determines the available Reset Delay times. The part is designed for use with DT tied to ground or OUT, but may be controlled by any logic signal which provides a threshold between 0.8 V and 2 V. The default condition for an open DT pin is the slower Reset time (DT = GND condition). Times are in pairs and are highlighted in the chart below. Consult factory for availability.

	DT=GND	DT=OUT
	Reset Time	Reset Time
NCV86601	8 ms	128 ms
NCV86602	8 ms	32 ms
NCV86603	16 ms	64 ms
NCV86604	32 ms	128 ms

The Delay Time select (DT) pin is logic level controlled and provides Reset Delay time per the chart. Note the DT pin is sampled only when RO is low, and changes to the DT pin when RO is high will not effect the reset delay time.

Thermal Shutdown

When the die temperature exceeds the Thermal Shutdown threshold, a Thermal Shutdown event is detected OUT is turned off, and RO goes low. The IC will remain in this state until the die temperature moves below the shutdown threshold (175°C typical) minus the hysteresis factor (25°C typical). The output will then turn back on and RO will go high after the RESET Delay time.

DESCRIPTION:	SOIC-8 NB	PAGE 2 OF 2

onsemi and **onsemi** are trademarks of Semiconductor Components Industries, LLC dba **onsemi** or its subsidiaries in the United States and/or other countries. **onsemi** reserves the right to make changes without further notice to any products herein. **onsemi** makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. **onsemi** does not convey any license under its patent rights nor the rights of others.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
