

Low Dropout Voltage Tracking Regulator

NCV4254C

The NCV4254C is a monolithic integrated low dropout tracking voltage regulator designed to provide an adjustable buffered output voltage that closely tracks the reference input voltage. The output delivers up to 70 mA while being able to be configured higher, lower or equal to the reference voltages.

The part can be used in automotive applications with remote sensors or any situation where it is necessary to isolate the output of the other regulator. The NCV4254C also enables the user to bestow a quick upgrade to their module when added current is needed and the existing regulator cannot provide.

Features

- Up to 70 mA Source Capability
- Low Output Tracking Tolerance
- Low Dropout (typ. 220 mV @ 70 mA)
- Low Disable Current in Stand-by Mode
- Wide Input Voltage Operating Range
- Protection Features:
 - ◆ Current Limitation
 - ◆ Thermal Shutdown
 - ◆ Reverse Input Voltage and Reverse Bias Voltage
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Grade 1 Qualified and PPAP Capable
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Typical Applications

- Off the module loads (e.g. sensors power supply)

Table 1. PIN FUNCTION DESCRIPTION

Pin No. SOIC-8	Pin No. SOIC-8 EP	Pin Name	Description
1	1	V _{out}	Tracker Output Voltage. Connect 2.2 μ F capacitor with ESR < 5 Ω to ground be connected directly or by a voltage divider for lower output voltages.
2, 3, 6, 7	6	GND	Power Supply Ground.
–	2, 3, 7	NC	Not Connected. Connect to GND
4	4	ADJ	Voltage Adjust Input. The adjust input can be connected directly to output pin for V _{out} = V _{EN/REF} or by a voltage divider for higher/lower output voltages. The adjust pin can be also connected to ground in case of using this device as a High-Side Driver.
4	4	ST	Tracking Regulator Status Output. Open collector output. Connect via a pull-up resistor to a positive voltage rail. A low signal indicates fault conditions at the regulator's output.
5	5	EN/REF	Enable / Reference. Connect the reference to this pin. A low signal disables the IC; a high signal switches it on. The reference voltage can be connected directly or by a voltage divider for lower output voltages.
8	8	V _{in}	Positive Power Supply Input. Connect 0.1 μ F capacitor to ground.
–	PAD	PAD	Exposed Pad. Connect to GND

Table 2. MAXIMUM RATINGS

Rating	Symbol	Min	Max	Unit
Input Voltage DC (Note 1)	V _{in}	–20	45	V
Peak Transient Voltage (Load Dump) (Note 2)	V _{in}	–	45	V
Output Voltage	V _{out}	–5	40	V
Enable / Reference Input Voltage	V _{EN/REF}	–20	40	V
Adjust Voltage (Adjust Version)	V _{ADJ}	–20	40	V
Status output Voltage (Status Output Version)	V _{ST}	–0.3	7	V
Maximum Junction Temperature	T _{J(max)}	–40	150	°C
Storage Temperature	T _{STG}	–55	150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. Load Dump Test B (with centralized load dump suppression) according to ISO16750-2 standard. Guaranteed by design. Not tested in production. Passed Class B according to ISO16750-1.

Table 3. ESD CAPABILITY (Note 3)

Rating	Symbol	Min	Max	Unit
ESD Capability, Human Body Model	ESD _{HBM}	–4	4	kV

3. This device series incorporates ESD protection and is tested by the following methods:
 ESD Human Body Model tested per AEC-Q100-002 (JS-001-2010)
 ESD Machine Model tested per AEC-Q100-003 (EIA/JESD22-A115)
 Field Induced Charge Device Model ESD characterization is not performed on plastic molded packages with body sizes <50 mm² due to the inability of a small package body to acquire and retain enough charge to meet the minimum CDM discharge current waveform characteristic defined in JEDEC JS-002-2014

APPLICATION INFORMATION

The NCV4254C tracking regulator is self-protected with internal thermal shutdown and internal current limit. Typical characteristics are shown in Figure 3 to Figure 18.

Input Decoupling (C_{in})

A ceramic or tantalum 0.1 μ F capacitor is recommended and should be connected close to the NCV4254C package. Higher capacitance and lower ESR will improve the overall line and load transient response.

If extremely fast input voltage transients are expected then appropriate input filter must be used in order to decrease rising and/or falling edges below 50 V/ μ s for proper operation. The filter can be composed of several capacitors in parallel.

Output Decoupling (C_{out})

The output capacitor for the NCV4254C is required for stability. Without it, the regulator output will oscillate. Actual size and type may vary depending upon the application load and temperature range. Capacitor effective series resistance (ESR) is also a factor in the IC stability. Worst-case is determined at the minimum ambient temperature and maximum load expected.

The output capacitor can be increased in size to any desired value above the minimum. One possible purpose of this would be to maintain the output voltage during brief conditions of negative input transients that might be characteristic of a particular system.

The capacitor must also be rated at all ambient temperatures expected in the system. To maintain regulator stability down to -40°C , a capacitor rated at that temperature must be used.

Tracking Regulator

The output voltage V_{out} is controlled by comparing it to the voltage applied at pin EN/REF and driving a PNP pass transistor accordingly. The control loop stability depends on the output capacitor C_{out} , the load current, the chip temperature and the poles/zeros introduced by the integrated circuit.

Protection circuitry prevents the IC as well as the application from destruction in case of catastrophic events. These safeguards contain output current limitation, reverse polarity protection as well as thermal shutdown in case of over temperature.

In order to avoid excessive power dissipation that could never be handled by the pass element and the package, the maximum output current is decreased at high input voltages.

The over temperature protection circuit prevents the IC from immediate destruction under fault conditions (e.g. Output continuously short-circuited) by reducing the output current. A thermal balance below 200°C junction temperature is established. Please note that a junction

temperature above 150°C is outside the maximum ratings and reduces the IC lifetime.

The NCV4254C allows a negative supply voltage. However, several small currents are flowing into the IC. For details see electrical characteristics table and typical performance graphs. The thermal protection circuit is not operating during reverse polarity condition.

Thermal Considerations

As power in the NCV4254C increases, it might become necessary to provide some thermal relief. The maximum power dissipation supported by the device is dependent upon board design and layout. Mounting pad configuration on the PCB, the board material, and the ambient temperature affect the rate of junction temperature rise for the part. When the NCV4254C has good thermal conductivity through the PCB, the junction temperature will be relatively low with high power applications. The maximum dissipation the NCV4254C can handle is given by:

$$P_{D(MAX)} = \frac{[T_{J(MAX)} - T_A]}{R_{\theta JA}} \quad (\text{eq. 1})$$

Since T_J is not recommended to exceed 150°C , then the NCV4254C (SOIC-8 EP) soldered on 645 mm^2 , 1 oz copper area, FR4 can dissipate up to 1.667 W when the ambient temperature (T_A) is 25°C . See Figure 19 and 20 for $R_{\theta JA}$ versus PCB Cu area. The power dissipated by the NCV4254C can be calculated from the following equations:

$$P_D \approx V_{in}(I_q @ I_{out}) + I_{out}(V_{in} - V_{out}) \quad (\text{eq. 2})$$

or

$$V_{in(MAX)} \approx \frac{P_{D(MAX)} + (V_{out} \times I_{out})}{I_{out} + I_q} \quad (\text{eq. 3})$$

Figure 19. $R_{\theta JA}$ vs. PCB CU Area (SOIC-8 Package)

NCV4254C

Figure 20. R_{θJA} vs. PCB CU Area (SOIC-8 EP Package)

Hints

V_{in} and GND printed circuit board traces should be as wide as possible. When the impedance of these traces is high, there is a chance to pick up noise or cause the regulator to malfunction. Place external components, especially the output capacitor, as close as possible to the NCV4254C and make traces as short as possible.

The NCV4254C is not developed in compliance with ISO26262 standard. If application is safety critical then the below application diagram shown in Figure 21 or 22 can be used.

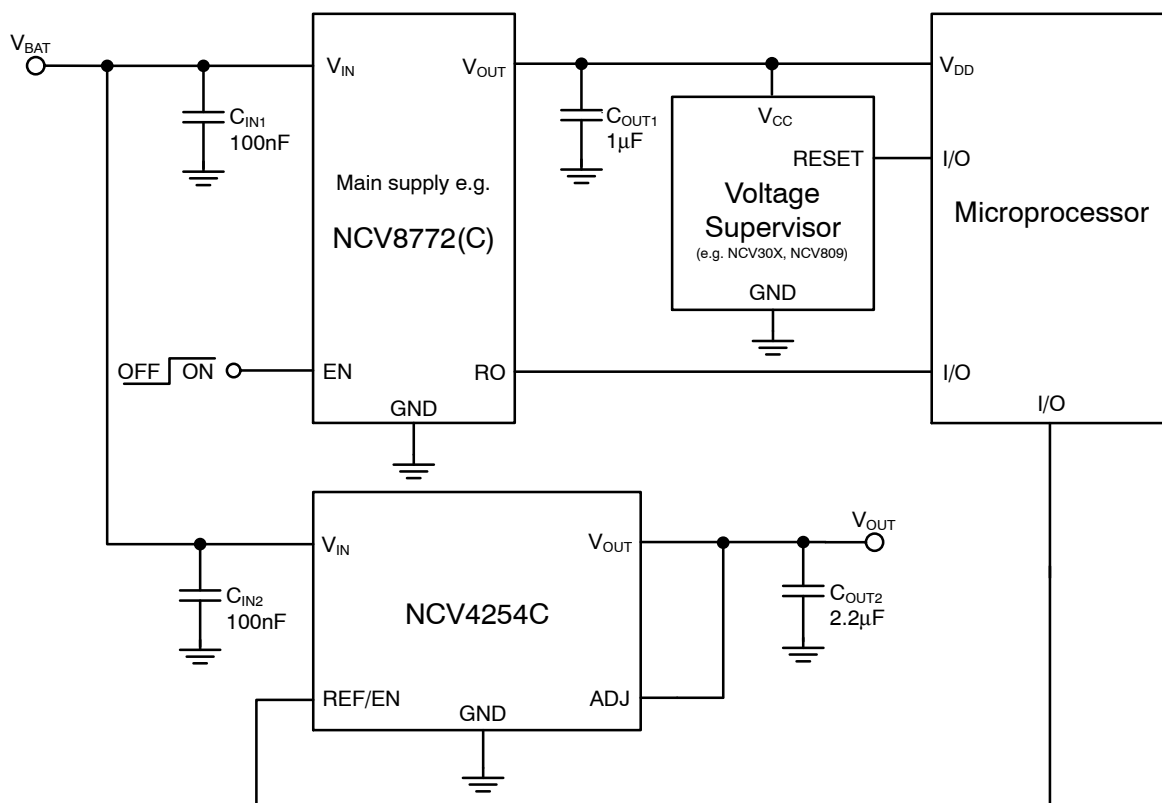

Figure 21. Application Diagram for ADJ version

NCV4254C

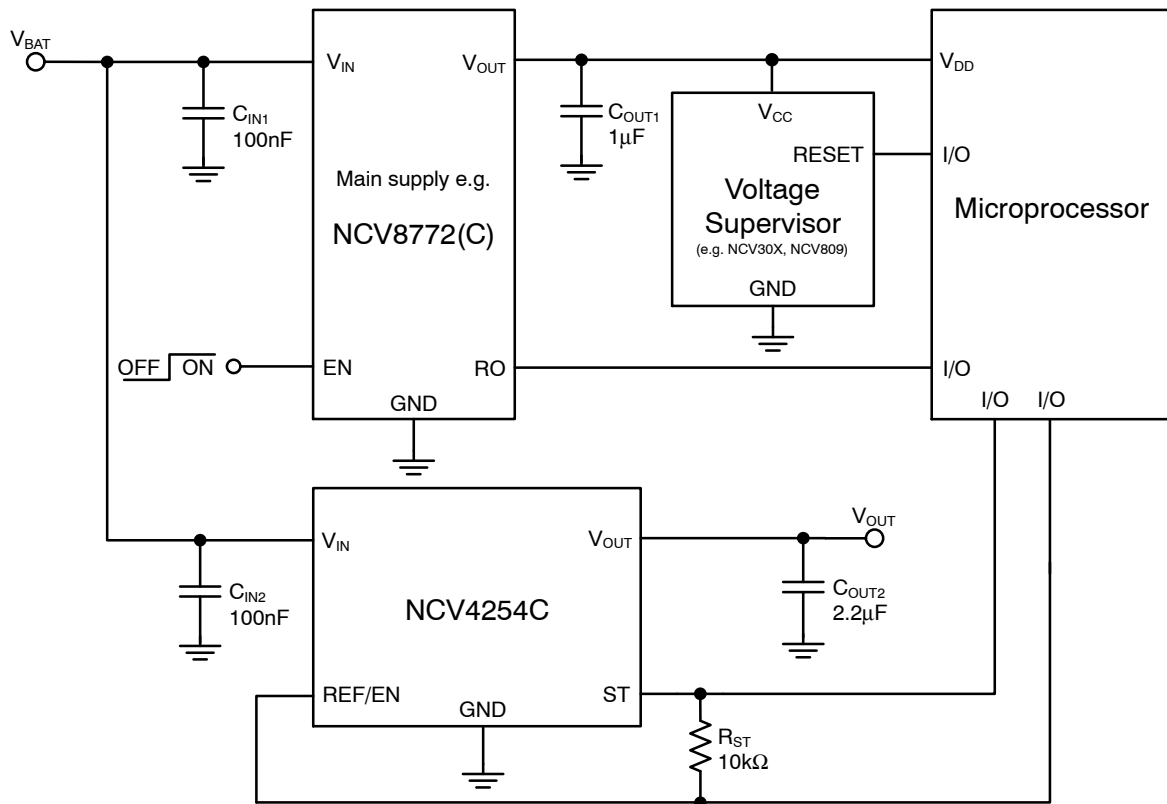

Figure 22. Application Diagram for ST version

CIRCUIT DESCRIPTION

ENABLE Function

By pulling the $V_{REF/EN}$ lead below 0.4 V typically, the IC is disabled and enters a Stand-by mode where the device draws less than 5 μ A from supply. When the $V_{REF/EN}$ lead is greater than 1.75 V, V_{OUT} tracks the $V_{REF/EN}$ lead normally.

STATUS Output

The status output is used as the power on indicator to the microcontroller. This signal indicates when the output voltage is suitable for reliable operation of the sensor. It pulls low when the output is not considered to be ready. ST is pulled up to V_{REF} (Figure 23) or V_{OUT} (Figure 24) by an external resistor, typically 10 k Ω .

Figure 23. Status Version Application Circuit: Status to Reference Voltage

Figure 24. Status Version Application Circuit: Status to Output Voltage

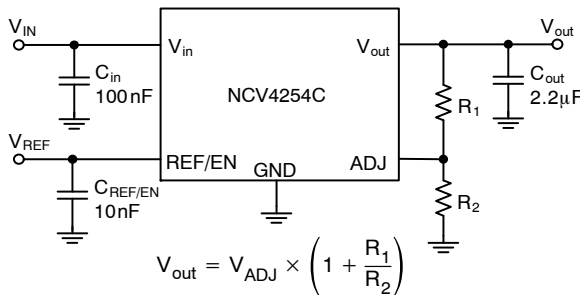

Figure 25. Adjust Version Application Circuit: Output Voltage Higher Than the Reference Voltage

Output Voltage

The output is capable of supplying 70 mA to the load while configured as a similar (Figure 26), lower (Figure 27) or higher (Figure 25) voltage as the reference lead. The Adj lead acts as the inverting terminal of the op amp and the V_{REF} lead as the non-inverting.

The device can also be configured as a high-side driver as displayed in Figure 28.

SCALE 1:1

SOIC-8 EP
CASE 751AC
ISSUE E

DATE 05 OCT 2022

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS
3. DIMENSION b DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE PROTRUSION SHALL BE 0.004 IN EXCESS OF MAXIMUM MATERIAL CONDITION.
4. DIMENSION D DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.006 PER SIDE. DIMENSION E1 DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.010 mm PER SIDE.
5. THE PACKAGE TOP MAY BE SMALLER THAN THE PACKAGE BOTTOM. DIMENSIONS D AND E1 ARE DETERMINED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY AT DATUM H.
6. DATUMS A AND B ARE TO BE DETERMINED AT DATUM H.
7. DIMENSIONS b AND c APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10 TO 0.25 FROM THE LEAD TIP.
8. A1 IS DEFINED AS THE VERTICAL DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT ON THE PACKAGE BODY.

DIM	MILLIMETERS		
	MIN.	NOM.	MAX.
A	1.35	1.55	1.75
A1	---	0.05	0.10
A2	1.35	1.50	1.65
b	0.31	0.41	0.51
c	0.17	0.21	0.23
D	4.90 BSC		
E	6.00 BSC		
E1	3.90 BSC		
e	1.27 BSC		
F	2.24	2.72	3.20
F1		0.20 REF	
G	1.55	2.03	2.51
G1		0.46 REF	
h	0.25	0.38	0.50
L	0.40	0.84	1.27
L1	1.04 REF		
L2	0.25 REF		
Ø	0°	4°	8°

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D."

GENERIC MARKING DIAGRAM*

XXXXXX = Specific Device Code
A = Assembly Location
Y = Year
WW = Work Week
■ = Pb-Free Package

*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot "■", may or may not be present and may be in either location. Some products may not follow the Generic Marking.

DESCRIPTION:	SOIC-8 EP	PAGE 1 OF 1

onsemi and onsemi are trademarks of Semiconductor Components Industries, LLC dba onsemi or its subsidiaries in the United States and/or other countries. onsemi reserves the right to make changes without further notice to any products herein. onsemi makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does onsemi assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. onsemi does not convey any license under its patent rights nor the rights of others.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
