

The following is in response to your requests for HTSUS, NAFTA, U. S. Customs Country of Origin, Duty Drawback or Buy American information.

HTSUS Harmonized Tariff Schedules

ON Semiconductor imports its semiconductors under HTSUS item numbers 8541 and 8542. These item numbers, with few exceptions, carry a DUTY-FREE rating.

NAFTA North American Free Trade Agreement

Since the majority of ON Semiconductor products enter the U.S. free of duty, ON does not apply for NAFTA treatment in order to minimize duty payments. As a result, ON does not routinely maintain a flow of information that will support NAFTA country of origin requirements.

U.S. Customs Country of Origin

ON Semiconductor has wafer fabrication, assembly and tests operations throughout the world. In addition, ON contracts with outside companies in many countries. It is not uncommon for a given part to be produced simultaneously in several countries with components of varying origins. As ON continues to optimize its resources, some production locations will change. *The ON parts you receive should be marked or coded with the place of assembly in accordance with U.S. Customs regulations. ON is unable to provide information other than that appearing on the specific part delivered.*

Duty Drawback (Refund)

Since the majority of ON Semiconductor products enter the U.S. free of duty, there is no related duty to be refunded.

Buy American Origin

ON Semiconductor manufacturing facilities are located worldwide. The overwhelming amount of assembly is done outside of the United States with non-U.S. piece parts. It would be a very rare circumstance that a semiconductor would be considered of U.S. origin according to U.S. Federal Acquisition Regulation.

ON Semiconductor appreciates the opportunity to service your requirements for semiconductor products and looks forward to continuing our mutually beneficial business relationship.
